[Sep 15 Security Notice!](#)

## What is ATutor?

**ATutor** is an Open Source Web-based **Learning Content Management System (LCMS)** designed with accessibility and adaptability in mind. Administrators can install or update ATutor in minutes, and develop custom templates to give ATutor a new look. Educators can quickly assemble, package, and redistribute Web-based instructional content, easily retrieve and import prepackaged content, and conduct their courses online. Students learn in an adaptive learning environment.

## Why ATutor?

ATutor is the first fully inclusive LCMS, complying with the **W3C WCAG 1.0**

**ATutor complies with XHTML 1.0 standards**

**accessibility specifications** at the AA+ level, allowing access to all potential learners, instructors, and administrators, including those with disabilities who may be accessing the system using assistive technologies. Conformance with **W3C XHTML 1.0** specifications ensures that ATutor is presented consistently in any standards compliant technology.

[ATutor Community Discussions RSS 2.0 XML feed](#)

ATutor has also adopted the **IMS/SCORM Content Packaging specifications**, allowing content developers to create reusable content that can be swapped between different e-learning systems. Content created in other IMS or SCORM conformant systems can be imported into ATutor, and visa versa. ATutor also includes a **SCORM 1.2 Runtime Environment (LMS RTE3)** for playing and managing SCORM based Sharable Content Objects (SCOs).

ATutor's base in Open Source technology makes it a cost effective tool for both small and large organizations presenting their instructional materials on the Web, or delivering fully independent online courses. **Comprehensive help** is available through the [documentation](#), through a number of [support services](#), or through the [public forums](#). Full language support is available through the [ATutor Translation Site](#).

## How to Get ATutor

ATutor software is available for **free** under the terms of the GNU [General Public License \(GPL\)](#). Visit the ATutor [Downloads](#) page to download a copy, or visit the other open source repositories listed on the [Links](#) page.
